## Transfer of treasury shares in the context of the acquisition of wind turbines

EnergyVision NV announces that, in connection with the acquisition of three wind turbines and the further expansion of its renewable energy assets, part of the acquisition price was settled through the transfer of treasury shares to a former shareholder of the acquired group.

The transfer took place on 12 May 2026 at a price of EUR 12.95 per share. In total, 38,610 treasury shares were transferred. The transferred shares are subject to a contractual lock-up period of six months.

Through this transaction, EnergyVision continues to pursue the strategic expansion of its sustainable energy portfolio. The integration of wind energy assets represents an important complement to the group's existing solar energy activities and contributes to a more balanced and complementary energy mix.

The total number of outstanding shares of EnergyVision remains unchanged, as the transaction relates exclusively to previously repurchased treasury shares.

This transaction constitutes a disposal of treasury shares and is disclosed in accordance with the applicable regulations.

## About EnergyVision

EnergyVision (ENRGY, Euronext Brussels) is a fast-growing, integrated energy and mobility company, founded in 2014 and active in Belgium, China and Morocco. The company makes the energy transition more accessible and faster by offering solar, wind and hydropower, as well as charging infrastructure, for which customers and businesses do not need to make any investment. At the same time, EnergyVision acts as an energy supplier and links the production of its own solar panels and wind turbines to the consumption of its customers, who benefit from a reduced energy bill, while the remaining electricity generated is supplied by EnergyVision to other energy customers and its own charging points. In this way, sustainable energy becomes widely available and the electricity grid remains stable and reliable. Through this integrated approach, combined with smart, flexible and datadriven management of its own installations and the network, EnergyVision achieves stable growth, technological innovation and a positive impact on the climate, always with the customer and the energy transition as the starting point.
